Professional Summary

Senior Ruby on Rails Engineer with 11+ years of experience designing, building, modernizing, and supporting scalable SaaS and logistics platforms. Strong expertise in Ruby, Ruby on Rails, PostgreSQL, Sidekiq, Redis, REST APIs, and microservices, with hands-on experience in distributed and event-driven architectures. Led a 12-engineer modernization of a production application from Rails 3/Ruby 1.9.2 to Rails 8/Ruby 3.2.0, serving 160 customers and millions of records. Hands-on technical leader experienced in architecture, performance optimization, production incident resolution, mentoring, and customer-facing technical support.

Skills

Languages	Ruby, JavaScript, TypeScript, SQL
Backend	Ruby on Rails, REST APIs, Sidekiq, Delayed Job, RSpec
Frontend	Next.js, React
Databases	PostgreSQL, Redis, Elasticsearch, PouchDB
Architecture	Microservices, Domain-Driven Design (DDD), Event-Driven Architecture, Distributed Systems
Cloud & Infrastructure	AWS S3, Docker
Observability	OpenTelemetry, SigNoz
AI & Developer Productivity	MCP, AI-assisted development, AI Agent Workflows

Professional Experience

Senior Software Engineer | DispatchTrack Pvt Ltd | Remote | Aug 2023 - Aug 2026

- Led a 12-engineer modernization of the production application from Ruby 1.9.2/Rails 3 to Ruby 3.2.0/Rails 8, serving 130 B2C and 30 B2B customers and millions of records; drove migration strategy, legacy-code refactoring, dependency/database compatibility, DDD adoption, phased rollout, and post-deployment monitoring.
- Led the architecture and migration of the Home Dashboard, a real-time truck and consignment tracking interface, coordinating 3 engineers while contributing across backend, database, WebSocket functionality, frontend changes, and phased rollout.
- Designed and implemented Sidekiq-based asynchronous processing for an EDI microservice, replacing Rake-task processing limited to ~40 records/minute with concurrent queue-based execution; introduced three retries with exponential backoff and failure notifications to improve reliability during processing spikes.
- Served as the primary technical Point of Contact (POC) for EDI microservices supporting 8 customers and 400–600 daily records, owning customer integrations, development, monitoring, deployment oversight, and P0 production issues across SFTP, API, and webhook integrations

- Designed and built a Next.js support SPA integrated with the EDI microservice, enabling a 10-member support team to identify, diagnose, and retry failed or delayed transactions without developer intervention, accelerating failure resolution and reducing manual log analysis.
- Built AI-assisted development workflows using MCP integrations, project knowledge bases, structured context, and reusable playbooks for Claude to improve development consistency and code-generation effectiveness.
- Led an 8-engineer team for 6–7 months while remaining a hands-on IC, driving architecture decisions, sprint planning, estimation, code reviews, UAT approvals, mentoring, cross-functional task allocation, and P0 incident resolution.

Associate Consultant / Tech Lead | TCS | Bangalore | Feb 2022 - July 2023

- Led a team of 6 engineers developing an internal communication platform using Ruby on Rails and Angular.
- Introduced React.js to address Angular performance and UI responsiveness issues after researching the technology, building and presenting a POC, implementing production modules, and leading testing, deployment, and team adoption.
- Mentored 4 junior engineers on new technologies and encouraged exploration of alternative technical approaches before finalizing implementation decisions.

Software Developer | Transtech Logistics Pvt Ltd | Bangalore | Nov 2016 - Jan 2022

- Redesigned the reporting architecture for workloads processing approximately 1 million records per month, introducing a dedicated reporting database with consolidated datasets to eliminate expensive joins across 7+ tables and reduce report execution time and memory consumption.
- Developed backend features for a transport and consignment management platform covering tracking and route planning using Ruby on Rails, PostgreSQL, REST APIs, and Delayed Job; contributed to migration from Ruby 1.9.7/Rails 3 to Ruby 2.0.2/Rails 5.
- Provided production support for 6 enterprise customers, independently investigating issues, implementing fixes and hot patches, deploying releases with minimal downtime, communicating with customers, and monitoring post-deployment behavior.
- Identified and remediated application security vulnerabilities including XSS, SQL injection, and dependency vulnerabilities while supporting application-server upgrades and production reliability.

System Engineer | INFOSYS LTD | Hyderabad | Dec 2014 - Oct 2016

- Supported large-scale Hadoop/Hive environments through cluster monitoring, log rotation, database troubleshooting, slow-query identification, and operational support.
- Monitored live database environments and application/automation workflows, troubleshooting client issues and supporting critical operational activities.

OPEN SOURCE PROJECTS

mt_line_eraser — Ruby Gem | 2,440+ downloads — Created a Ruby gem to remove empty lines from files within a directory, originally developed to automate a recurring development workflow at Transtech.

Education

Bachelor of Engineering (B.E.), Computer Science | Sasurie College of Engineering | 2014
